
WINDSTREAM SD-WAN

REINVENT YOUR NETWORK AND TRANSFORM YOUR BUSINESS

MORE ECONOMICAL USE OF YOUR BANDWIDTH WITHOUT IT COMPLEXITIES

Your network just can't keep up with your cloud applications — Windstream's Software Defined Wide Area Network is a business aware cloud network designed to optimize application performance, reduce costs, and simplify overall network management.

RESILIENT & EFFICIENT

Eliminate outages and improve bandwidth efficiency with Active/Active Failover. Mix and match data connections from other providers or offload the burden of infrastructure management onto us. Augment your current network with powerful software, turning it into something totally new.

OPTIMIZED MANAGEMENT

What if you could right-size your network and optimize costs? With Windstream SD-WAN, you can take the guesswork out of capacity planning and design and obtain deep application visibility and control to maximize bandwidth utilization. Satisfying unique location requirements. Keeping costs down. And paying for only the access and capacity you need.

THE WINDSTREAM EXPERIENCE: LEVERAGING THE TRANSFORMATIVE POWER OF SD-WAN

Analyze: Leverage analytics across services to provide deep insights to customer and employee behavior

Manage: Set automated application priorities and policies with real-time visibility and control

Optimize: Keep costs down and maximize bandwidth utilization by right-sizing your network

Grow: Add bandwidth, new circuits or locations to your network quickly and cost effectively

TAILORED SOLUTIONS

Windstream delivers a full suite of services specifically designed to improve your customer experience including cloud-based unified communications, security and WiFi. Our trusted heritage as an ISP gives us deep experience with crucial last mile access options and managing networks for customers of every size.

IMPROVE BUSINESS AGILITY

Quickly add new locations or circuits to your network and increase branch uptime/availability. Easily manage network traffic from a single control source.

WINDSTREAM SD-WAN CONCIERGE™

A premium fully-managed service to get the most from SD-WAN — Your network environment is continuously, proactively monitored and optimized for peak performance by Windstream experts.

An assigned service manager will be your “Virtual IT Guy” to provide personalized guidance, analyze network and application performance and recommend actions needed to get the greatest possible value from your network investment.
